Here are our responses to the issues raised by CDM Smith in their 12/18 memo.

1) CWCM

A. Missing locations

These locations are reported in the attached Location_v3 file.

B. CAS_RN values

These cas_rn values will be used in future submittals.

C. Result_value missing

D. Reporting_detection_limit missing

These issues are the result of CDM Smith's rules for reporting coeluting congeners (5/11/2012 memo and subsequent discussions), where only the base congener is to have the numeric value reported. If there is a workaround for this that preserves the other rules for reporting these results, we will be happy to apply it.

2) RM10.9 Addendum

A. Lab information

As listed in the reference value additions in the cover letter (20121015 EDD.LPR 10.9 RA Prog Rpt 1.pdf):

TestResultQC_v3

lab_name_code
GEOEX
GeoTesting Express

TestResultQC_v3

lab_name_code
TAMC
Test America, N Canton

The full details for which are:

GeoTesting Express
125 Nagog Park
Suite 105
Acton, MA 01720
978-635-0266

Test America
4101 Shuffel St NW
North Canton, OH 44720
865-291-3000

B. Grain size cas_rn values

In future submittals, hydrometer grain size cas_rn values will include the zero as described.

C. Valid cas_rn values

In future submittals, the cas_rn values will be used as listed.

Regarding SIEVE24KU, the chemical name of PERCENT FINER THAN 1.5 INCH SIEVE is correct, the cas_rn selected by the lab for this is misleading. We suggest SIEVE38KU instead.
